

How to calibrate the real board?

- Put the board on the floor. Start the game and go to the "Setup plank" menu.
- To calibrate the length, place the controllers at the ends of the board on both sides. Press the button at the controller, from which side the board will start. Click "To length" on the screen.
- To calibrate the width, put the controllers on the sides of the board and press the button on one of them. Click "To Width" on the screen.
- Verify the correctness of the calibration in the VR glasses, make any changes, if necessary.
- Save the settings by clicking the "Save" button.

To reset the settings, click "Reset".

To load the previous settings, click "Load".

To return to the initial menu, click "Back".
